

Carbon Block Technology

Custom Product Manufacturing Questions

Your answers to the following questions will help guide CB Tech's product design and pricing for a custom carbon block manufactured to your specifications:

1. Are you interested in an unfinished filter block, or a finished filter with end caps and wrap?
 - If it is a finished filter, can you provide an end cap design? Would you prefer to provide us with end caps to use in production?
 - Can you provide us with samples (e.g., filters, blocks, housings, etc.) or drawings to base our design on?
2. What are the requested dimensions of the finished filter and/or unfinished block (outside diameter, inside diameter, and length)?
3. What are the ranges for operating pressure and flow rate?
4. What contaminants must be filtered and what is the desired capacity for each contaminant?
5. Will the product be certified?
 - If so, for what standards and contaminants?
6. Will the product use a Performance Indication Device?
7. What is your required timeframe for initial delivery?
8. What is the delivery location?
9. What region will the product be marketed in?
10. Who is your current filter supplier?
11. What do you anticipate your filter purchase volume will be (minimum order and annual)?
12. What target price have you budgeted for the filter?

Please ship samples to:

Multi-Pure International
7251 Cathedral Rock Drive
Las Vegas, NV 89128
Attn: Contract Sales
